

## CS680: HW14

### Pseudo Code:

```
Command cCmd = new CompositeCommand("Abstract Header");
cCmd.setCommand( new FontSizeChange("12pt") );
cCmd.setCommand( new FontNameChange("Times") );
cCmd.setCommand( new FontStyleChange("bold") );
cCmd.setCommand( new FontStyleChange ("center") );
cCmd.execute();
```

So I used notes for giving FontSizeChange, FontNameChange, FontStyleChange, FontStyleChange argument value inside the setCommand.
